

PEDAL SLIDER BASEPLATE

VERSION 1.1

LAST UPDATED: 17-02-2025

Before you start:

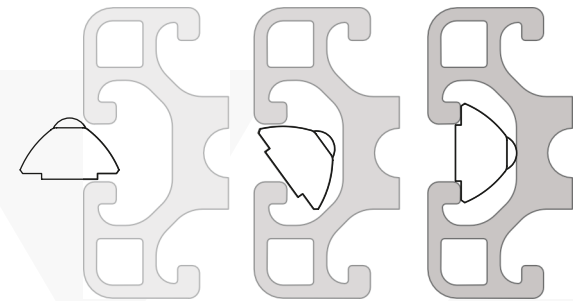

Firstly we would just like to say thank you for purchasing your new Vitus Components Product. Now its time to start the build! This instruction manual will help and guide you through the build process step-by-step. Below is some key information along with the tools required to complete assembly. The next page you will see the bill of materials, please ensure you have all the correct hardware and that everything has been delivered safely.

Compatibility:

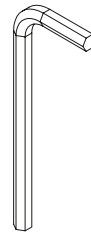

The Universal Pedal Slider Baseplate is compatible with all profile aluminum profile rigs. There are multiple ways of mounting the baseplate. This can be done either with the (seat) slider or you can directly mount the baseplate to the profile on your pedal tray. There is detailed step-by-step instructions for both options. We have also listed what pedals are capable of mounting to this baseplate.

Inserting Slot-Nuts:

There is nothing worst than completing your build just finished putting the end caps on and then realizing you need to use more slot nuts! Don't worry we have got you! Please see the illustration showing a real simple and easy way to insert the slot-nuts into the profile from the side. Once in you can simply slide the slot nut up and down the profile to your desired location. Some times using your allen key to assist can make life easier.

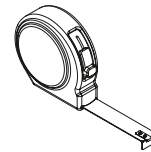

Tools required:

4/5/6MM

8/10/13MM

Hardware Checklist:

PEDAL BASEPLATE

#	Part	QTY	Note
A1	Pedal base plate	1	
A2	Bolt M8 X 16 DIN 912	4

Seat Slider Handle

For the handle to fit snugly between the sliders, it needs to be widened a bit by bending it until it seats properly. Please review our seat slider installation video for reference.
